Abstract (en)

A tool (1) which is included in a machine has a locking position and an open position. The tool (1) or a part thereof is movable between the locking position and the open position. A locking device (2) for the tool (1) includes a movable guide (11) and a carrier member (10) which is guided in the guide (11, 12). The carrier member (10) is motionally connected to the tool (1) for realising the movement of the tool (1) between the locking position and the open position. <IMAGE>
