Abstract (en)

[origin: EP1543893A1] The airfoil has thick wing (101) of thickness (E1) and a thin wing (102) of thickness (E2). A joggling (201) is disposed between two parts (105, 106), where slopes formed in the joggling are calculated based on the thicknesses of the wings. A small slope in the joggling is provided on the side of the wing (101), and a large slope in the joggling is provided on the side of the wing (102). An independent claim is also included for a process of joggling an airfoil.
