Abstract (en)
[origin: EP1543963A1] The method involves establishing the deviation from an ideal position and selecting a suitable correction profile from a number of selectable profiles. These selectable profiles (P1,P2,P3) can be stored in the control of the transport mechanism (10). Independent claim describes a correction device where a device (21) is provided for storing a number of selectable correction profiles. These can be in the form of support point tables.
