Abstract (en)

[origin: EP1544113A1] The method for the producing of container packing and for the packing of containers such as bottles or cans entails withdrawing a flat lying separating insert from a feed magazine (1) after which the compartments (A) are opened and moved over the plane of movement of the container group and/or outer packing (C). The inserts in this position are transferred to a centering and lowering device and from there with assimilation of the speed of supply of the container group are guided into the intermediate spaces and/or into the outer packing.
