Abstract (en)
A collapsible container (10) with angularly related multiple folding sections (34), each section (34) extending at an angle to the vertical, and flexure zones (40) between adjacent sections (34) for flexibly moving the sections between a first open position in the expanded container and a second position folded upon itself in the collapsed container, the flexure zones (40) resisting movement of the sections (34) in both the fully expanded container and the collapsed container, as well as any intermediate position wherein only selected flexure zones (40) are in an open position.
