Abstract (en)

A closing element (10) for sanitary fixture drains adapted for being actuated remotely, comprises a disc-shaped element (12) adapted for coming into contact with at least one edge of a drain. A development axis (14) of the closing element is substantially perpendicular to the disc-shaped element (12). An actuating portion (16) is associated to the disc-shaped element (12) and adapted for interacting with remote actuating means associated to the drain for opening and closing the drain itself. Bar-shaped elements (18) or stems extend from the disc-shaped element (12) in the vicinity of an external circumference of the disc-shaped element itself, and along the development axis (14) of the closing element (10). <IMAGE>
