Abstract (en)

Hinge, particularly to support frames or suchlike, comprising a pintle (3), of the female type, provided with a substantially cylindrical first axial cavity (4), open at one end, into which a pin (23) provided with an annular throat (25) is able to be axially inserted. A clamping element (17), elastically deformable, cooperates both with an annular seating (6), made in the first axial cavity (4), and also with the annular throat (25) of the pin (23), in order to prevent the axial removal of the pin (23) from the axial cavity (4). <IMAGE>
