Abstract (en)

[origin: WO2004021875A1] The invention relates to a method for fitting contact lenses to an eye, and to an appliance for carrying out one such method. The inventive method represents an improvement on conventional methods in that the position of a contact lens on the eye is determined by a plurality of measuring moments, and at least one value is calculated from the position data, said value then forming the basis of a lens treatment or selection.
