Abstract (en)

[origin: WO2004022177A1] One object with the present invention is to achieve a fastening device for a removable brake device (4) on a snowboard (1). Another object is to achieve a fastening device that is cost-efficient and simple to use. The device comprises an active braking part in the form of a movable brake heel (10) that is flexibly joined to a base section (11) arranged on the snowboard (1) and the invention is characterised by the base section (11) and the snowboard (1) each comprising means (5, 9, 21, 24) that allow the base section (11) to slide to the intended position on the snowboard (1) and means (8, 8', 19, 25), which in a retaining manner, lock the base section (11) in place on the snowboard (1).
