Abstract (en)
[origin: WO2004024266A1] The present invention comprises a gaming device (204) for allowing a player to play multiple games simultaneously. The gaming device comprises at least one game source (80, 82, 84), a server (60) in communication with the game source, at least one display device (200) in communication with the server, and at least one input device (200) in communication with the display device (200). The game source provides at least one game to the player. The server is configured to combine data to create a set of games for display on display device (800). The player is allowed to specify games to play (300, 302) and place a wager using the input device (200). After games are completed, game outcomes are displayed on the display device (200).
