Abstract (en)

[origin: WO2004034246A2] The invention relates to a device and a method for managing at least one data object of an electrographic printer or copier. At least the data (V1=12) of a data object is stored in a database (12). An identification (V1) is assigned to the data object. At least one first source text (14), which contains the identification (V1) of the data object is generated. A second source text (22) is generated from the first source text (14), whereby at least the identification (V1) of the data object is replaced at least by part of the data that is stored in the database (12) for said data object (V1).
