Abstract (en)

[origin: WO2004028088A2] The invention relates to a method for selecting a personal device (20) assigned to a given user amongst a set of personal devices (20A, 20B, 20C, 20D) assigned to different users. The method is characterized in that it includes the following steps: initially storing a biometric characteristic of the user to which said personal device has been assigned in every personal device; gathering the biometric characteristics stored in all personal devices and memorizing them in association with an identifier of every personal device; capturing a biometric characteristic of the user; retaining the personal device in which the stored biometric characteristics identical to the captured biometric characteristic. The invention also relates to a personal device and to a terminal that can exchange data with personal devices, comprising at least one terminal and at least one personal device.
