Abstract (en)  
[origin: WO2004015519A2] A cable network content delivery system providing advertising information via a cable network (5) and an advertising content interface (20) are described. An advertiser (21) submits advertising content over an internet (24) which is then adapted for a cable network (5). A data gateway (31) stores the advertising information. The system processes a user command received via the cable network (5), including an advertising information search command, and provides advertising information retrieved via the cable network (5).
