Abstract (en)

[origin: EP1547931A2] A carrier apparatus is provided to ship or store products of various sizes and shapes. The carrier apparatus comprises a platform (2). Grooves (6) are formed on the platform on which a product (A) is placed, and fixing members (3) are placed within the grooves to allow the fixing members to be moved to various positions on a support surface (1) of the platform. Moreover, space is provided between the upper board (11) and lower board (12) of the platform to insert a fork part of a freight handling vehicle. Bumpers (15) are inserted between the upper side of upper board member and the lower surface of the product placed on the support surface. The support surface on the upper side of the board member is formed as a planar surface on which casters (31), installed to the bottom of the product, are able to roll. Void spaces are formed within the lower part of board member. <IMAGE>
