Abstract (en)
The invention relates to apparatus for the movement of goods in a goods storage area or areas. In one embodiment the goods storage area is or includes the interior of a goods storage trailer for a vehicle. The apparatus is provided with a body and includes at least one platform (2) which can be movable in a substantially vertical direction. Wheels (10,12,14,16) are provided on the apparatus body to allow movement of the apparatus along the floor of the goods storage area. The apparatus is of a width such that the same substantially extends across the width of the good storage trailer so as to allow access from the platform (2) to all of the goods storage trailer interior for the loading and unloading goods via the platform (2).
