Abstract (en)
[origin: FR2864036A1] The faucet has a plastic body (2) with an outlet end (6) whose cross section is closed by a transversal closing panel (7) formed by molding, as an integrated part of the body. The panel is integrated with an adjacent side wall of the end by a thin joint (21) constituting a peripheral zone of low mechanical resistance. The zone has split perimeter without burr. The panel is withdrawn by a ring-pull (23) to completely open the end.
