Abstract (en)

[origin: WO2004032897A2] The invention relates to pharmaceutical preparations comprising at least one emulsifier, at least one emulsifier adjunct and/or solvent and at least one lipid, characterised in that the mass ratio of emulsifier to emulsifier adjunct and/or solvent (Smix) is 1:1 to 9:1 and the total lipid fraction is > 0 % (m/m). Said preparation at least partly inhibits at least one intestinal enzyme and/or at least one intestinal efflux system. Said preparations may be used to increase the bioavailability of medicaments which are lipophilic and/or substrates for intestinal metabolising enzymes and/or intestinal efflux systems, in particular steroids.
