Abstract (en)  
[origin: WO2004022187A1] A game controller system for use in playing video games, including a manually operable game controller (10) provided with manually operable activating units (11) such as switches, keys and buttons, a game computer (1) storing and executing the video game in the form of software provided with signal inputs (3, 4) for ordinary input units such as a keyboard (9) and/or mouse (8), which game computer (1) is connected to a display unit (2) for displaying representations in relation to the game as played, said game controller (10) being arranged to communicate with said game computer (1). Said game controller (10) being arranged to communicate with the game computer (1) via at least one input (3, 4) for said ordinary input units (8, 9), whereby the operations of said activating units (11) on the game controller (10) are arranged to be programmable in order to stimulate operation of arbitrary keys or key combinations on an ordinary keyboard (9).
