Abstract (en)

[origin: WO2004030864A1] The invention relates to a manual grinding machine (10) comprising a dust extraction device and a grinding plate (26) which is accommodated on the housing (12) and which can be driven in a rotating or oscillating manner. Said manual grinding machine is simple and economical to produce and is easy to drive by virtue of the fact that only the air flow of a vacuum cleaner (42) is used, especially a commercial-type vacuum cleaner, in order to drive the grinding plate (26) and to produce the flow of suctioning air.
