Abstract (en)

[origin: WO2004033287A1] The invention relates to the field of submarines and, in particular, to the architectural layout thereof. More specifically, the invention relates to a submarine comprising at least two cylindrical resistant hulls (2, 3) which are connected to one another by means of a non-resistant structure (6) . The invention is characterised in that one of the aforementioned hulls constitutes a normally-inhabited living/operational-type hull comprising the living quarters and the control station, while a second hull constitutes a utility-type hull which is not normally inhabited.
