Abstract (en)
[origin: WO2004034155A2] The invention relates to a clockwork mechanism, especially for a tacograph, comprising a housing (9) and a stepper motor for driving a toothed gear mechanism. The toothed gear mechanism comprises toothed gears (1,2,3) which are arranged on at least two axes. Damping means are provided between the housing (9) and the toothed gear mechanism. A toothed gear (1,2,3) can also be provided with a flyweight instead of the damping means. The damping means or the toothed gear (1,2,3) provided with a flyweight enable the noise emissions caused during the operation of the toothed gear mechanism to be reduced.
