Abstract (en)  
[origin: US2003234603A1] A device for adjusting the height of a drawer, which, by way of a draw-out guide connected to said drawer on the side of said drawer, is guided by means of draw-out rails on supporting rails on the carcass side, comprises an adjustment device by means of which the drawer is raiseable and lowerable relative to the supporting rails. On the draw-out rails of the draw-out guide, at right angles to these, sliders are guided in guides, with said sliders comprising supports for the underside or the bottom of the drawer. The sliders are movable in height by way of the adjustment device.
