Abstract (en)
[origin: EP1550616A1] The present invention relates to a bottle cap safety seal, of among the different seals intended for bottle sealing purposes which is characterised in a special construction which incorporates rupture points in relation with the rim and others which facilitate the separation of the disc with respect to the skirt of the seal, leaving an under-ring on the neck or not. It is likewise characterised in a manner of securing which employs projecting teeth arranged with an equal distribution over the length of the inside of the lower cylindrical body of the seal with a design which optimises the easy entrance and the good securing of the seal. <IMAGE>
