Abstract (en)
The present invention relates to an improved non-plastic container (1) for storing food in which a lid (2) fabricated using plastic based on an injection molding method is sealingly engaged to a non-plastic container body formed of a heat resisting glass, a stainless material, a heat resisting ceramic ware, etc. The food storing container (1) having a non-plastic container body comprises a closed ring shaped plastic rim (3) formed in an upper side of an opening of the non-plastic container body wherein the closed ring shaped plastic rim (3) surrounds all outer surrounding portions of the container body (1), and at least more than one locking protrusion (31) integrally formed at the opposite sides of the plastic rim (3) wherein the locking protrusions are inserted into locking holes (24) formed in locking wings (23) of the plastic lid. <IMAGE>
