Abstract (en)

[origin: WO2004028581A1] The invention relates to a vessel prosthesis or patch, made from a biocompatible polymer with a microporous, finely-fibrillated structure and a method for improving the e-modulus of said vessel prostheses or patches. According to the invention, the vessel prostheses or patches are subjected to a full stretching (extension) with a degree of extension between 30 % and 250 % and subsequent restoration.
