Abstract (en)
[origin: WO2004007304A1] The invention relates to a parallelepiped-shaped or cube-shaped closeable folding box (10) comprising an affixed bottom flap (31) and top flap (35) and comprising a hanging tab (51), which is provided with a hanging cutout (53) and arranged on an edge of the folding box body, this edge extending between said flaps. In addition, the folding box body, when viewed in the longitudinal direction (2) of the punched shape, comprises a sealing tab (40) at one end and a combination section (50) at the other end. The combination section (50) consists of an inner area (51) and of at least one outer area (61, 65), whereby the inner area (51) is a hanging tab (51) provided with a hanging cutout (53), whereas the outer area (61, 65) serves for fastening the combination section (50) to the lateral wall (21). The invention provides a folding box, which can be easily and safely handled during production, storage and filling. This folding box encloses the contents in an essentially dust-tight manner and, when for sale, can be presented while stacked or hung.
