Abstract (en)
[origin: FR2844571A1] The valve for use in an engine cooling system comprises a cylindrical casing (4), into which pipes (50, 52, 58, 62) open. A cylinder (80) with recesses (84, 86, 88) in its surface can be turned to connect these. The novelty is that all the pipes open into the cylindrical inner surface of the casing. An Independent claim is included for an engine cooling system incorporating the valve.
