Abstract (en)

[origin: WO03100530A2] The invention relates to a method and device for the transport of toner material (12) from a container (16). A discharge opening on the container (16) is provided with toner material (12) which is transported away from the discharge area by means of an air flow. Air is supplied into the container (16) through at least one air-permeable section in a container wall. The invention further relates to a tubular line (132) for the transport of toner material (12) and a sealing element for sealing a reservoir container (16) containing toner material.
