Abstract (en)
  The present invention is related to a method comprising a first step of printing an image (4) on a carrier by a first printing device (1), and at least one further step of inserting said carrier into a second device (2) and performing a second operation on said carrier, both said first and second device being coupled to a computer (3), said second operation being defined by source data stored on said computer, characterized in that an identifying element (7a,7b) is printed in the vicinity of said image (4), allowing said second device (2) to identify said image and to automatically perform said second operation, on the basis of said source data. <IMAGE>
