Abstract (en)

[origin: EP1553025A1] The reinforcement is conceived for pallets in which, both its loading platform (3) and its lower skids (2) are made of cardboard. The reinforcement consists of a grooved profile (1), cross-sectionally "U"-shaped, the middle branch of which presents an amplitude that complies with the width of the skids (2), the length of which coincides with that of the actual pallet and the side branches of which present a considerable less height than that of the skids (2). The reinforcement, of laminated cardboard, extends along the whole length of the pallet body, both, when its skids also do so, or when the skids are discontinuous. <IMAGE>
