Abstract (en)
[origin: EP1553291A2] The engine (1) has a control ring (16) engaged in the lateral recess formed on each piston (2) running in the direction of a secant, and adapted to a cross-sectional shape of the control ring. The lateral recess bounds a base wall of the piston. The control ring is arranged in controlling sliding contact via an inner control face with the base wall. The inward stroke of the pistons is controlled by the control ring. A cam (11) of an eccentric shaft controls the outward stroke of the pistons. The shaft extends through a casing body (4) of an engine casing which encloses the cylinders (3).
