Abstract (en)
[origin: WO2004036999A1] Device for supporting portions of dough, comprising a number of support members for supporting dough portions, a first support member comprising a first support surface for supporting a dough portion when the device is placed in a first position, and a second support member comprising a second support surface for a dough portion for supporting a dough portion when the device is placed in a second position having another spatial orientation than the first position, the first support member comprising a first form member provided with at least one cavity that is adapted to a shape of a dough portion. Preferably the support surfaces of the first support member and the second support member, respectively, face away from each other. The invention further relates to an assembly for dough treatment comprising a device for dough treatment and a device for supporting dough portions.
