Abstract (en)

[origin: WO2004037471A2] According to the invention, the wear in the region of the tool head of a tool machine, in particular a scalping machine for machining long workpieces with a round cross-section may be reduced, whereby a tool head with a tool holder is adjustable essentially axially to the rotation axis, in which the tool holder and the adjuster device each have planar slide surfaces which correspond with each other.
