Abstract (en)
[origin: WO2004027072A2] The present invention relates to scaffold/matrix attachment regions isolated from hamster cells and their use for the industrial production of recombinant proteins and polypeptides. In one embodiment the invention is related to a method for production of Factor VII polypeptides or Factor VII-related polypeptides comprising a) transfecting a mammalian cell with an expression vector comprising a nucleic acid molecule encoding Factor VII or a Factor VII-related polypeptide, expression control regions operatively linked to thereto and at least one S/MAR element; b) culturing the transfected cell under conditions for expression of Factor VII or a Factor VII-related polypeptide and c) isolating the expressed polypeptide by suitable means.
