Abstract (en)
[origin: US2006156591A1] The invention concerns a steam iron comprising a water reservoir (1), a hydraulic circuit (3) connecting the reservoir (1) to an electrically heated vaporization chamber (23), the circuit including in series an anti-drip valve (4), and an adjustable drip element (5) capable, in a self-cleaning position, of opening allowing a free passageway and supplying water to said chamber. The invention is characterized in that the drip element comprises means for opening or maintaining open the anti-drip valve (4), when it is in the self-cleaning position.
