Abstract (en)

[origin: WO2004040114A1] A method and a device for controlling an internal combustion engine are disclosed, in particular for controlling the amount of injected fuel. A parameter characterising the fuel amount is determined from operating parameters, from which control signals for an actuator are determined. A correction value for correcting the parameter determining the fuel amount is determined from the engine speed, the parameter determining the fuel amount and the parameter determining the delivery start point.
