Abstract (en)

[origin: WO2004036731A1] The invention relates to a method for running-up a shaft assembly (10, 14, 21, 22). This shaft assembly comprises a turbine, particularly a gas turbine (10), a generator (22) and an exciter (14), which are connected to one another by a common shaft (21). During the starting process, the turbine is ran-up by means of a running-up device. A simplification of the system is made possible by virtue of the fact that the exciter (14) is used as a running-up device.
