Abstract (en)

The present invention concerns a valve (1) for regulating a mass flow, preferably a mass of waste in a waste suction system (30), including a valve chamber (2), a displaceable valve plate (3) and an actuation unit (4), where the valve chamber (2) at one end is adapted to be disposed between two pipe ends (5, 6), and where the actuation unit (4) is disposed at a second end of the valve chamber (2) and adapted to displace the valve plate (3) in the valve chamber (2) from a closed first position to an open second position, where the valve chamber (2) is designed with a number of air inlets (12) designed to lead secondary transport air in through the valve (1). <??>The present invention furthermore concerns a waste suction system (30), including a pipe system (31, 32), a number of waste shafts and a number of valves (1), where the valve (1) is disposed in the pipe system (31, 32) so that the secondary transport air (A) through the air inlet (12) is in downstream flow of a primary transport air (D) through the pipe system (31, 32). <??>The present invention furthermore concerns a method for using a valve (1) in a waste suction system (30). <IMAGE>
