Abstract (en)  
A vertical compensating building component comprises an elongate U-shaped extrusion (10) having holding means internally on each of two limbs (12). The two holding means are opposed to each other and each is to seat a respective gripping profile (14) on the reverse of a resilient member (16), the obverse face of which has one or more outwardly-extending seats (18) having a width to provide seating against a vertical or an angled side of a panel (20) to be fitted thereinto. <IMAGE>
