Abstract (en)

[origin: WO2004037614A1] The invention relates to a method for transmitting a safety-critical operating condition of a safety-critical system in a motor vehicle to the vehicle driver and a device for carrying out said method. Transmission of a safety-critical operating condition to the vehicle driver by means of a control lamp can be disrupted if the control lamp is broken or the vehicle driver ignores the control lamp, wherefore measures are provided which reduce the vehicle driver's comfort while driving and draw his attention to the safety-critical operating condition.
