Abstract (en)

[origin: WO2004029421A1] The invention relates to a method for producing a device for converting a rotatory motion into a translatory motion during which at least one functional layer (3) made of a ceramic, metal-ceramic or metallic material is applied at least in sections while clamping it in a predominantly mechanical manner to a surface of the device. The invention also relates to the corresponding device for converting a rotatory motion into a translatory motion.
