Abstract (en)  
[origin: WO2004042257A1] The invention relates to a motor vehicle drive device. An oil pump (6) which can only be driven by an electric motor (8) is provided for supplying oil to a drive gearbox (2) and optionally other drive elements. Preferably, a spacing region (14) is provided between the oil pump (6) and both the electric motor (8) and the drive motor (4), in which at least one torque transmission device (16), for example a hydrodynamic torque converter, a shiftable drive clutch and/or at least one electric motor can be positioned, in order to form a hybrid drive. A plurality of different drive devices can be formed by a standardised form of embodiment.
