Abstract (en)
[origin: WO0100064A1] A unit (22) for supporting a baby. The unit includes a supporting surface. The surface is shaped so that when a baby is supported on the surface, the baby's normal anatomical cervical spine curvature is maintained. The supporting surface may have first and second parts, the first part being adapted to accommodate the head, and the second part being adapted to accommodate the remainder of the body of the baby. The first and second parts may be disposed relative to one another so as to support the back of the baby's head in a position posterior to the upper part of the remainder of the baby's body. The first part may define a cavity. The supporting surface may be surrounded by a peripheral wall. The unit may be a mattress but could also be a chair.
