Abstract (en)

The protective sleeve (1) comprises four sheets (2, 3, 4, 5) of a flexible material. The sheets (2, 3, 4, 5) are arranged in layers on top of each other, each sheet (2, 3, 4, 5) having a top edge, an opposing bottom edge and two mutually opposed side edges connecting the top edges and bottom edges. Each sheet (2, 3, 4, 5) is attached to its respective adjacent sheet (s) at the bottom edges and at at least one of the two side edges so as to form a front pocket (7), a central pocket (8) and a back pocket (9). The central pocket (8) is open at the top edges and is adapted to contain a disc-shaped recording medium (10). The bottom of the central pocket (8), determining the depth into which the recording medium (10) may be inserted in the central pocket (8), is defined at a substantial distance (D) from the bottom edges of the sheets (2, 3, 4, 5). <IMAGE>
