Abstract (en)

[origin: EP1557498A2] A concrete block for securing slopes and embankments has the block provided with one or more vertical bores (7) through which are pushed pins to secure the block. A geo mat (2) is cast into the block and has an extension section outside the block to secure with backfilling. The vertical pins secure individual blocks and also serve to lock a vertical stack of blocks. Some of the outer surfaces of the blocks can have a surface decoration.
