Abstract (en)  
[origin: EP1557500A1] Regulating and blocking fitting comprises a valve seat housing (2), a valve outlet housing (4), an intermediate pipe (6) fitted between the valve seat housing and the valve outlet housing, a ventilating valve (49) with a sealing element which closes a ventilating opening when a valve wedge (22) is opened, and an adjusting body which interacts with a spindle. Preferred Features: The adjusting body slides longitudinally together with the spindle from a first position into a second position.
