Abstract (en)

[origin: WO2004041590A1] A "warning triangle" sign comprises a frame (10) having at least two elongate frame elements connected to one another for relative movement between a storage condition in which they lie alongside and generally parallel to one another and a deployed condition in which they lie at an inclination to one another as at least two sides of a triangle; a flexible generally triangular display element (11) including fluorescent and retro-reflective portions connected to at least one of the frame elements and connected or adapted for connection to the or at least one other of said frame elements when deployed to present a generally flat triangular visible surface; and support means (12) for supporting the frame in a substantially upright disposition on the ground.
