Abstract (en)
[origin: FR2845358A1] The dispenser has a reservoir (17) with an actuating wall (2) and a dispensing orifice (10). A body (1) defines a frame (10) having a thickness to determine defined inscribed volume (V_i). The wall extending over the frame is deformable to reduce the reservoir volume. A return spring part (16) urging the wall into a rest configuration defines maximum reservoir volume. The spring part is formed integrally by the body.
