Abstract (en)  
[origin: WO2004005642A1] A roof window with a pane supporting sash structure comprising horizontal top and bottom members (1, 2) connected by parallel side members (3, 4), which are at least partially wooden profiles. The said sash structure is accommodated by two hinge devices (9) as a pivot sash in a frame structure with top and bottom members (5, 6) connected by side members (7, 8) at least partially made of wood profiles. Each of the hinge devices (9) comprises a first part having a base plate (10) to be secured to the frame structure, a second part having a base plate to be secured to the sash structure and first securing means for securing the first base plate (10) to the inward facing side of one the side members (7, 8). The first securing means comprises at least one transversely extending member (14, 16) connecting the first base plate (10) to at least one transverse force spreading element (15, 17).
