Abstract (en)

[origin: WO2004042298A1] The invention relates to a container (1) comprising at least one cooling module (2) provided with a coolant reservoir (3). Said container is characterised in that a cavity (4) which is separate from the coolant reservoir (3) is provided adjacent to the coolant reservoir (3), on the side facing the product to be cooled, said cavity containing a eutectic cooling brine. Said eutectic cooling brine can absorb the cold and can assume a buffer function when the cold is transferred to the product (8) to be cooled or during the absorption of heat from the product (8) to be cooled.
